AAPG Datapages/Archives: Contributions of Compaction and ...

In fact, equation 1 reflects the equilibrium relation between source terms and the diffusion term; the diffusion term represents the capacity of fluid expulsion, and its magnitude depends on the permeability of sediments (k), viscosity of pore fluid (μ), and the gradient of pore pressure. The source terms represent the various factors causing excess fluid volume that should be drained. For a **Sell, Buy or Rent Compaction and Fluid Migration ...**
