Additionally, the novel classification according to modification of specific polymer properties rather than filler chemical composition provides a better understanding of the relationships between processing, structure and properties of products containing functional fillers and the identification of new markets and applications.

[Functional Fillers and Specialty Minerals for Plastics](#)

Functional fillers are widely used in plastics and the trend is for ever increasing use of fillers driven by several factors. Firstly, fillers allow for plastic materials with a much wider range of properties including properties not normally associated with plastics, such as high electrical conductivity or thermal conductivity.
