The Trophic Cascade in Lakes edited by Stephen R. Carpenter

Fluctuations in fish populations in lakes can cascade through food webs to alter nutrient cycling, algal biomass and primary production. Trophic cascades may interact with nutrients and physical factors to explain most of the variance in lake ecosystem process rates.

Trophic cascades may interact with nutrients and physical factors to explain most of the variance in lake ecosystem process rates. This text tests this idea by manipulating whole lakes experimentally and coordinating this with paleolimnological studies, simulation modeling, and small-scale enclosure experiments.
